JMP.chat gives you a real NANP phone number (US/Canada), full SMS and calls, and everything routes through XMPP which has great native Linux clients. It's about \$3-4/month and you don't need any Google account at all.

You'd just need:

- A JMP.chat account (sign up with just an email)
- Dino or Gajim as your XMPP client on Debian
- Done — texts and calls work natively
